

## Project Experience

### *Entergy Services, Inc. - Occupational Safety and Health Inspection Services*

**Project Date:**

2008-2014

**Entities Involved:**

Entergy Services, Inc.

**Contract Value:**

\$2,100,000+ (Prime Contractor)

**Roles Performed:**

- ISO 14001 Environmental Audits
- OHSAS 18001/2 Health and Safety Audits

**Project Description:**

EMS has developed and implemented more than four hundred ISO 14001 & OHSAS 18001/2 based environmental, health and safety audits for Entergy across their nationwide network of fossil, nuclear, and hydro electric plant facilities. During the audit process, EMS safety specialists would conduct field inspections of personnel work areas at each Entergy facility. These field inspections, along with personnel interviews and records review, would be used to evaluate corporate health and safety protocols in accordance with OSHA regulations. These evaluations included compliance audit reports of confined space entry, equipment and electrical safeguards, electrical lockout / tagout procedures, crane safety and rigging, safety training, HAZCOM programs, emergency preparedness and response plans, incident response and investigation, and internal OSHA document control. At the end of the inspection, the EMS, audit team would then conduct an exit briefing at the end of the audit. The audit team presented the results of the audit, including positive observations, audit findings, and unresolved issues, as well as discussed areas that may require more extensive investigation. In the closing audit meeting, the reporting process was described, including distribution of initial and final reports.
